

# LANE CHANGING

Lane Changing is one of the most common maneuvers in driving.

It is where you make a sideways or lateral move from one lane to another on roads with two or more lanes.

You will also need to lane change when:

- \* pulling over to the curb.
- \* pulling away from curb.
- \* overtaking another vehicle.
- \* Anytime you make a lateral move.

5. Signal OFF

4. Before Moving Over

3. Check blind spot (shoulder check)  
\*Then **Look Forward**

2. Signal ON

1. Check for Safe Gap in rear view mirror.

#1 Always check your rear-view mirror at regular intervals (every 5 seconds) this will help decide if you have a safe gap.

#2 If safe, put your signal ON.

#3 Shoulder check in the direction you want to move – Then Look Forward - as this will prevent you pulling the wheel and drifting into the other lane.

#4. Move into the lane smoothly, keeping your speed.

#5. When safely over, turn your signal off and re-check your rear-view mirror.

- Some drivers pull the wheel when they check their blind spot or come off the gas slightly and the slow down as they lane change
